

Phase 4 – Project Planning

AI-powered FAQ and customer support automation

Development Plan

Organize the project as a modular Node.js and Express.js backend.

Implementation Sequence

Project setup and dependencies → Express configuration → MongoDB connection → authentication → FAQ management → search → AI integration → API testing → documentation and demonstration.

Security Plan

Use JWT for protected routes, bcrypt for password hashing, and validation/error handling for safer operations.

Testing Plan

Verify registration, login, protected FAQ creation, FAQ search, and other documented API operations.
